Harvest 2024

The winter of 2024 in the Vinho Verde region experienced the highest average temperatures since 1931, but the rainfall at the beginning of the cycle helped to replenish the soil's water levels. Spring brought more rain, providing the necessary water for the vine cycle. The summer was hot and dry, but without extremes, favoring the ripening of the grapes. With immense quality, the result of very balanced ripening, this harvest resulted in wines with good presence, structure and a rich and persistent aromatic nature, combining minerality and fruit.

Winemaking Process

This wine embodies the Guedes Family's passion for winemaking and represents the most iconic blend in the Region, crafted with beloved varieties from the Vinhos Verdes wine region: the Loureiro and the Alvarinho. The night harvest allows the grapes to keep their freshness and, consequently, preserve their aromatic properties. Upon arrival at the vinification center, the grapes undergo soft pressing at low pressure. The alcoholic fermentation of each variety happens in stainless steel vats under strictly controlled temperatures to preserve the most typical aromas of the varieties.
